MNU 30

MOBILE NITROGEN. INCREASED SAFETY. LESS DOWNTIME.

Nitrogen When and Where You Need It.

The MNU-30 Mobile Nitrogen Unit brings high-pressure, (99.9% pure) nitrogen directly to the transformer, helping utility crews service faster, work safer, and spend less time moving equipment and cylinders.

Available in truck or skid/trailer-mounted configurations, the MNU-30 delivers reliable, on-demand nitrogen wherever the job takes you. It's a smarter, more efficient way to support transformer maintenance while reducing operator exposure and keeping crews focused on the work that matters.

WWW.CVINTL.COM

One Technician. One System.

A Safer, Smarter Way to Service Transformers.

The MNU-30 System is designed to simplify transformer servicing with true one-person operation, helping crews get the job done efficiently without sacrificing safety.
An ergonomically designed control panel, 50 foot hose reel, integrated regulators, check valves, and purpose-built safety features put essential controls right where technicians need them. The result: less equipment to manage, fewer hands required, and a more streamlined service operation from setup to shutdown.

NITROGEN GENERATION

Keep your MNU-30 cylinders ready for service with Cvi's on-site nitrogen generation solutions. The SNG-3 is a fully integrated, electronically driven, turnkey system engineered to produce nitrogen gas up to 99.5% purity, while the compact Cvi Nitro-Lite delivers an efficient, space-saving solution for applications where a smaller footprint and lower-volume nitrogen supply are ideal. Together, they provide utility crews with reliable, on-demand nitrogen generation, reducing dependence on delivered nitrogen.

MODEL: MNU-30

Part Number: MNU-30

NITROGEN CAPACITY

Number of Cylinders:	6
Cylinder Capacity:	380 cubic feet
Total System Capacity:	2280
